

BACK-END SOFTWARE DEVELOPER — REMOTE

Do you want to stay on the cutting edge of software development? Have you wanted to work on a greenfield application instead of doing maintenance on an app written in a language from 20 years ago? Are you the type who hears about a new language or SDK and immediately wants to see what it's about? If being a developer is more who you are than what you do, then Adyptation is the place for you.

We are looking for someone passionate about building software and working with the latest technology — someone who is more interested in building a product from the ground up than in refining a product that has already been built. We value those who understand the fast-paced nature of startups, who are not afraid of a challenge, and who want to make a positive difference in the lives of others by doing meaningful work in healthcare. This is a full-time role. For convenience, **we offer flexible hours and remote work options.**

Responsibilities

The back-end software developer:

- Implements new feature development, maintains existing codebases, and integrates third-party SDKs/APIs
- Designs, architects, and deploys solutions for the software product
- Builds and maintains a continuous-deployment pipeline
- Supports data protection and security efforts to meet industry regulations
- Builds and implements detailed product requirements of new features, API capabilities, and SDK interfaces and develops framework integrations
- Collaborates with the technical team and engineering lead to achieve objectives

Experience

This person should have:

- At least 3 years of experience with developing production-level systems
- Experience with testing (Unit, End-To-End, etc...)
- Experience with Python and Node.js
- Cloud experience, preferably AWS
- Building and interacting with REST APIs
- GraphQL, SQL, and NoSQL Experience
- Familiarity with Agile methodologies
- Ability to think outside the box to offer a different solution to a problem
- Experience with the Setup/Maintenance of CI/CD pipelines

Bonus Qualities

It would be nice, but not required, for this person to have:

- A BS or an MS in Computer Science, Software Engineering, or a related technical field
- Experience with machine-learning models and data analytics
- Experience with Serverless functions (FaaS)
- Experience with HIPPA and Electronic Health Records
- Experience with HTML/CSS, JavaScript, and React
- Experience with Mobile Development (iOS, Android, React Native)

ADYPTATION

We are looking for team members who:

- Are excited about our mission and are aligned with our values
- Love learning, growing, and who can adapt to change
- Communicate effectively
- Take ownership and responsibility over their work
- Are driven toward excellence
- Want to add value to the world and participate in meaningful work
- Enjoy collaborating with a team and value the contribution of others
- Are kind
- Enjoy working in an outcomes-driven environment

Benefits

Join our team, and you can:

- Be a part of a passionate team solving meaningful problems in healthcare
- Get involved on the ground floor with a younger business
- Be a key team member and shape the development of our company

Our team members enjoy:

- Medical, dental, and vision coverage (75% paid by the company)
- Paid vacation and holidays
- Flexible work options, including early or late hours and remote work

About Us

Adyptation is a young, fast-growing business located in southwest OH. We provide software and data analytics for healthcare providers to support patient health tracking and ongoing care management. We specialize in transforming data into insights for difficult-to-manage conditions like autoimmune disease.

Our Vision

We envision a world where underserved patients receive precise care and are restored to engage fully in their lives.

Our Mission

Our mission is to improve the treatment and diagnosis process for difficult-to-manage conditions like autoimmune disease. We develop solutions to capture insights on patients' health that lead to more precise and effective care.

Our Values

Blaze New Trails

We are not satisfied with the standard way of doing things. We want to play a part in creating a new world. We take risks and venture into uncharted territory.

Enjoy the Journey

We take on challenging problems that require significant time and effort to solve. We are committed to making consistent progress and celebrating the journey along the way.

Benefit Others

We are committed to being responsible stewards and serving our employees, customers, investors, partners, and communities. We are passionate about generating a net-positive effect in healthcare by improving patient quality of life and reducing the economic burden of care.
